<b>Product Description</b>	<p>The proposed garbage segregation and monitoring systems mainly consists of sensors, Arduino Uno controller, GSM, Wi-Fi module and shutter based garbage bins. Ultrasonic sensors are used to detect the level of the garbage in the garbage bins. The output of level detector is given to Arduino controller. In addition to ultra sonic sensors, proximity sensors and humidity are attached in the shutters valves of the garbage bins to segregate the disposals of plastics, metal and organic wastes. Garbage bins are designed with shutter based systems and are operated using servo motors. Respective sensors will detect the nature of the waste and provides logical information to the Arduino controller. The level of garbage in the dustbins is detected with the help of ultrasonic sensors system and communicated to the respective authority to recycle or dispose the waste.</p>

<b>Product Description</b>	<p>Now a days due to the depletion of fossil fuels, there is a search of alternative fuels in the form of renewable energy, among all the renewable energy, solar PV energy place a vital role in the power production and also it is environmentally friendly. In this work A new data logger using the Arduino open-source electronic platform was developed to solve the current problem of monitoring photovoltaic (PV) systems at low-cost, especially in remote areas or regions in developing countries. The Performance of the Photovoltaic module is enhanced by water cooling method various parameters such as module voltage, current, and the solar radiation and horizontal surface, ambient temperature are measured. The electrical performance is improved by the thermal management system using the intelligent controller. On observation it is found that PV module electrical efficiency is improved by 10% and surface temperature is reduced up to 8° C. A new data logger using the Arduino open-source electronic platform was developed to solve the current problem of monitoring photovoltaic (PV) systems at low-cost, especially in remote areas or regions in developing countries.</p>
