Disposal Policy

Objective of the policy

- To minimize the use of disposable items
- To recycle the possible used items
- To implement end-of-life solutions for disposable products

Introduction to the policy

Single-use or disposable objects are products and packaging that are used once and then discarded. These objects are only utilized for a few seconds, but their environmental impact can last thousands of years. Even when these goods are recyclable, we consume energy and natural resources from our surroundings to create these readily preventable items.

Guidelines from Public Statutory and Non-Statutory Bodies/ Committees.

1. Categorizing the single use / disposable products and careful assessment of their impact on the environment, economy and society.
2. Implementation of end-of-life solutions for disposable products.
3. Adopting plastic waste recycling strategies

Importance and Implementation at KPRIET

Reducing the usage of disposable items indirectly reduces the amount of carbon dioxide in the atmosphere. It also saves our environment. At KPRIET, the usage of disposable items has been minimized. Used items are taken for recycling.

Responsible Statutory and Non-Statutory Bodies/ Committees at KPRIET

Community service and 5S

Meeting Frequency

Twice a semester
